

Delaware Conservation District Educates Municipal Officials on Stormwater Requirements

Ed Magargee, district manager at the Delaware County Conservation District (DCCD) co-led a session to help local municipalities navigate the Municipal Separate Storm Sewer System Permit (MS-4). The session was part of the “Small Scale Stormwater Plan” training held in Gradyville on December 19, 2013. Due to high demand, a second event was added December 18 to accommodate more attendees.

Magargee, who also serves as the coordinator for the Delaware County MS-4 permit program, was asked to speak at the training. His session addressed regulatory updates including the simplified approach for smaller homeowner projects.

“This was truly a partnership effort to help municipalities in Delaware County comply with new regulations. I was pleased to participate in this effort which furthers DCCD’s mission of ensuring the wise use of Delaware County’s natural resources and to protect and restore the natural environment through the conservation of its soil, water, and related resources,” said Magargee.

Forty-eight municipal employees from Chester and Delaware Counties attended. The training was a joint effort with the Chester Ridley Crum Watershed Association and the Delaware County Consortium of Governments.
